Coding Challenge 2

Exercise

1. Change the "Add to-do item" button so the icon is on the right side of the button instead of the left.

2. Change the behavior of the completed tasks: when you check a task as complete, it should go to the BOTTOM of the completed list. (In the original, when you check off a task as complete, it goes to the top of the completed list)

3. Create a new button that will open a dialog box. This dialog box will have two buttons: one to clear the To-Do list, and the other to clear the completed list.
   To do this, you will need to modify the HTML and JavaScript/jQuery.

The button
Create a button in HTML, right below the "Add to-do item" button.
   - The text of the button should be "Clear list".
   - The id of the button should be "clear-list" in order to match the CSS, which is already provided.
   - Add an icon to the button: "ui-icon-trash". Set it to appear on the right side of the button.
   - When the user clicks the button, a dialog box opens up (see below).

The dialog box
Create an empty div with the id "del-items". This will be the dialog box for clearing items. Give the dialog box an appropriate title.
   - The dialog box should be modal, and should not open until the "Clear list" button is clicked.
   - The box will have two buttons:
       - Clear To-Do, which will remove all of the items from the To-Do list.
       - Clear Completed, which will clear all of the items from the Completed list.
   - You may want to add some brief instructions to the box.
   - The box should close after it clears the appropriate list.

When you are finished, save the page and preview it in a web browser. It should look like and work like the Solution PDF.
You will submit the lastname-to-do-v2 folder as described below.
